

Free App - Preempt Inspector

Health Check for Enterprise Passwords, Stealthy Administrators and More

Hackers are targeting your employee's credentials.

Do you know if you're vulnerable?

Preempt Inspector is a powerful application that quickly assesses password health and presence of stealthy administrators and provides actionable results to reduce your company's risk of a credential-based attack.

Recent high profile attacks prove that enterprises continue to struggle to overcome their primary attack vector: compromised credentials. Employees routinely place their company at risk by using passwords remarkably similar to those in their personal accounts, such as social media, banking, and more. There are also issues with stealthy admins going undetected and having more access than they should. Attackers use that as an opportunity to exploit your business.

At Preempt we have witnessed that weak passwords, stealthy administrators, password policy and exposed passwords are found in every organization. Our customers can easily run a regular report on the health of these from our full product in order to solve these problems and reduce their attack surface. Because we have seen the positive effect it has had, Preempt has made this component available as a free app so that we can help solve these some of these problems for all organizations and make all businesses around the world more secure by putting this data at your security teams fingertips.

Preempt combines password hashes from major breaches, such as those at Yahoo! and LinkedIn, along with an exhaustive dictionary of compromised and weak credentials to identify potential risk to the organization. Results immediately reveal which accounts have the potential to be compromised, allowing for quick remediation.

Detect Weak User Passwords

Run regular reporting to expose who has weak or duplicate passwords that are easily cracked by attackers so that the security team can recommend remediation with strong user passwords and enforce best practices.

Eliminate Risk from Another Company's Breach

Preempt Inspector helps ensure your company isn't at risk because of another company's breach. Deep contextual intelligence from high profile breaches, combined with weak password dictionaries find those which are direct matches and those similar enough to be easily cracked.

Stealthy (or Shadow) Admins

Preempt Inspector helps you discover users who have administrator-level privileges but are not in the admin group. Gain actionable data for you to be able to mitigate the risk.

Password Policy

Preempt Inspector examines the domain password policy settings and reveals a password complexity score. The score can help you assess risk and make adjustments to reduce it.

Requirements

- + Windows 8 or above
Windows machine with .NET 4.5
Internet Explorer 10 or above
- + Valid user with Domain Admin privileges
- + Access to the internet to download the password dictionary
- + Solid IT administrative knowledge

Exposed Passwords

Preempt Inspector reviews the GPOs, looks for exposed user passwords, and reports back on which GPO contained the exposed password.

Get Started Today

As a complementary service, Preempt Inspector allows administrators to quickly and easily identify those accounts which represent vulnerabilities. The application works closely with Active Directory to get a real-time view.

Preempt Inspector is Just the Beginning

Unlike traditional detection and reporting mechanisms which only serve to point out areas of concern, Preempt Inspector is part of a broader effort by Preempt to eliminate internal security threats such as breaches, malicious insiders and employee human error. The Preempt Platform, offers a complete solution that represents a holistic, deeply contextual effort aimed at identifying user and entity behavioral threats and implementing immediate, automated responses to stop threats before they take a foothold in the organization. Preempt remains the leading solution for remediating this common attack vector and the only solution to offer proactive and appropriate response mechanisms to ensure legitimate business is not disrupted.

Preempt protects organizations by eliminating security threats. Threats are not black or white and the Preempt Platform is the only solution that preempts threats with continuous threat prevention that automatically adapts based on identity, behavior and risk. This ensures that both security threats and risky employee activities are responded to with the right level of security at the right time. The platform easily scales to provide comprehensive identity based protection across organizations of any size.
